"Write less code"

↓ ↓ columns / attributes / series / variable / features / fields

rows / records / data points →

1. Numerical / continuous

population

height

year

age

weight

mip

2. Categorical

Ordinal

Nominal

grade (A, B, C)

Ranks (2556, 126)

Ratings (High, avg, low)

country (USA, India, China)

Gender (M, F)

Subject (Maths, Science)

* Anatomy of matplotlib:

Col^m involved :

1 1 Var $\rightarrow$ Univariate Analysis 

2. 2 Var $\rightarrow$ Bi-variate Analysis $\begin{cases} N-N \\ N-C \\ C-C \end{cases}$

3. 2 + var $\rightarrow$ Multivariate Analysis

* pie charts :

- Whenever we want to plot data in % or proportions, we use pie charts

plt. pie () # HW
