

OOPS - 2|Lecture

- Using Dunder / Magic methods
- Inheritance
- Private Properties
- Multiple Inheritance
 - Method Resolution Order

Dunder / Magic method

Double underscore

--init--

to enable certain behaviors

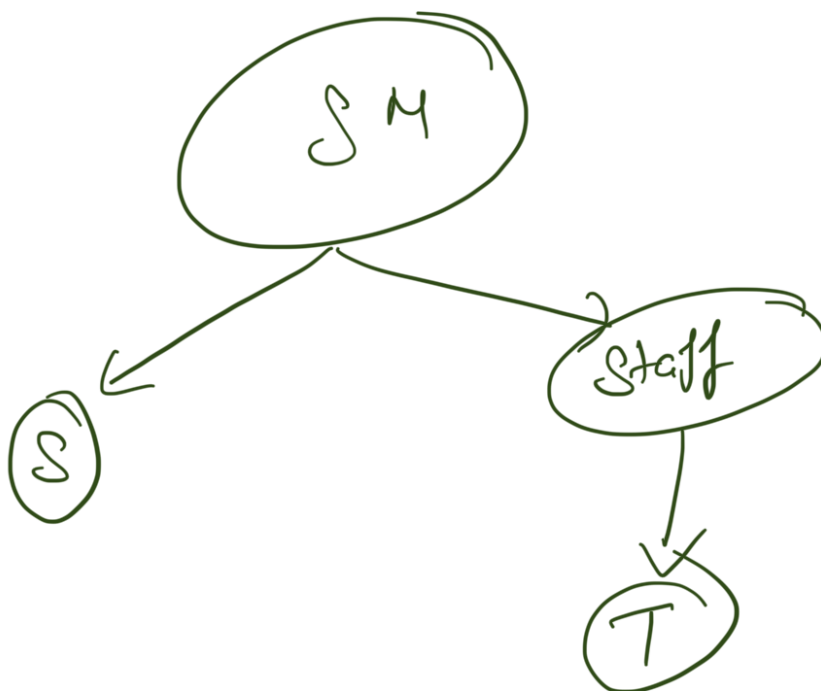

Inheritance

class Parent :

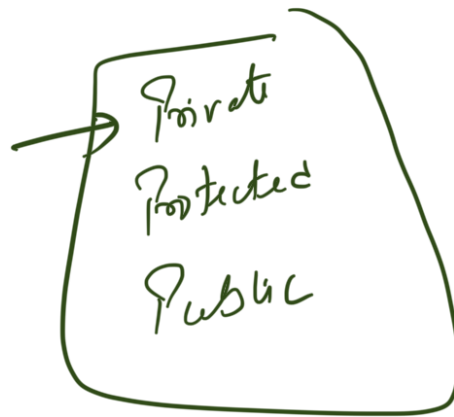

def ---

class Son(Parent)

def ---

Python Private properties

- ① Public default
- ② Protected (—)
- ③ Private (---)
 - ↳ ~~Nothing~~ Can be completely Private in python
 - ↳ --- makes your variables as Private
 - ↳ python internally creates it with name of `__classname__private_var`
 - ↳ here we can still access with above name

Feature	Private	Protected
	✓	✗

① Access within same class

② Access in derived class

③ Access outside class

N

Multiple Inheritance

MRO = method Resolution order → C3 Linearization

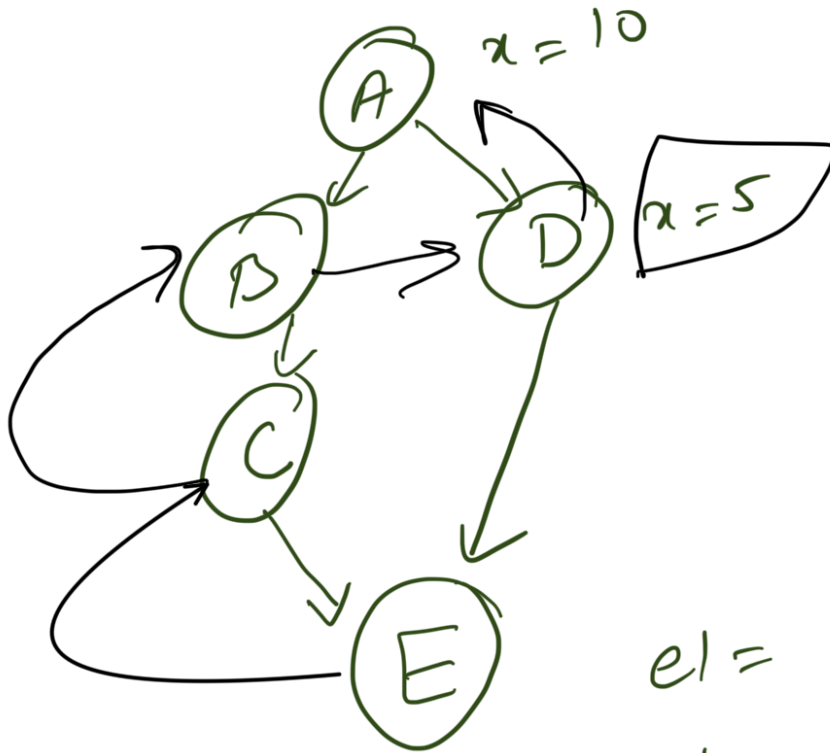

① left to right
② we go to a

Point when all its children are considered

$$e = E()$$

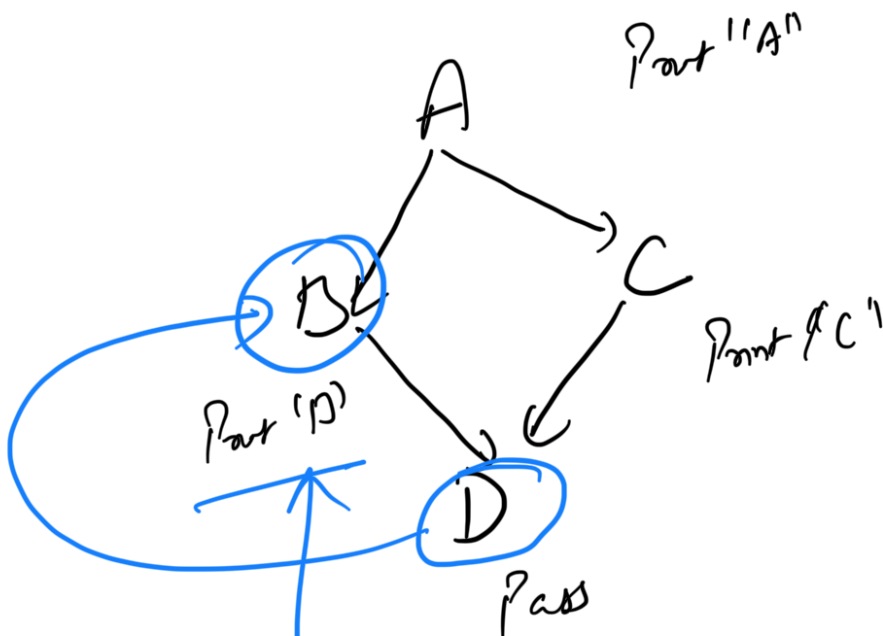

e.check()

$$el = E()$$

el. α ;

$\Rightarrow 5$

$$\underline{d = D() \text{ show()}}$$

Q. 5.
